

Technoline weather station WS15WH

AGDAOTERBLA00025
5901750506048
RTVBLWS002

The WS15WH weather station is a thermometer and hygrometer that can measure temperature and humidity both indoors and outdoors. The device allows up to three external sensors, which means that optional sensors can be purchased to monitor temperature and humidity in different locations. The device has a memory function for daily measurements of the highest and lowest temperature and humidity values, allowing you to monitor changes and trends over time. The temperature trend indicator shows the fluctuation of measurement values at an hourly interval. The device is equipped with a graphical weather forecast that allows you to read the predicted weather through pictograms such as sunny, partly cloudy, overcast, rain and snow. The clock and calendar make it easy to keep track of time and date in 12/24 hour format and in 7 languages. The LCD display is backlit in orange and measures 61×93 mm. The device has an alarm function with a snooze function, allowing you to wake up or remind yourself of important events. The device can be hung or placed, and is powered by batteries that are included for both the station and the external wireless sensor.

Specification

- Working temperature:** -30 to 60°C
- Dimensions (mm) LxWxH:** 87 x 25 x 125 mm
- Functions:** measuring the temperature
alarm function
snooze function
folding stand support
clock
temperature and humidity sensor
- Set contains:** 2 x AAA battery
2 x AA battery
