Remote Controlled Car MXRC-200Maxlife remote controlled car MXRC-200 will take the user into a whirlwind of exciting fun. The car features driven wheels with rubber and highly grippy tires. This allows the vehicle to easily navigate various tracks and terrains, providing dynamic fun on any type of surface. The vehicle is controlled by an RC remote, which is included in the set. It has two control sticks, each responsible for one pair of wheels, allowing for precise control of the car's movement. The remote control is very simple and intuitive to use. The remote controlled car can perform basic movements such as driving forward, backward, and turning, ensuring dynamic driving. Additionally, it performs other stunts - flips, wheel transfers, and a 360° spin around its own axis. It is the operator who is responsible for all the tricks the car performs. 4-wheel drive Controlled via remote 360° Drift Speed 7 km/h Rubber, grippy tires
