

Maxlife remote-controlled dog MXRD-100 white

OEM0200577
5907457734890

The remote-controlled dog is a toy that not only provides a lot of joy but also helps develop important skills in children, such as coordination, creativity, and interpersonal abilities. With the intuitive remote control, which is easy to use, children can fully control the movements and behavior of the robot. This allows them to play while also practicing their manual skills. The remote-controlled puppy is also an interactive toy that responds to commands like "sit" and "lie down," which enhances the child's communication skills. The puppy can dance to music, move its head, wag its tail, and bark. The user has full control over the robot, can adjust the sound volume, choose commands, and program the dog's behavior according to their preferences. It introduces interactive play that stimulates the child's imagination. By creating their own scenarios and stories, children learn creative thinking. - Command SIT - Command LIE DOWN - Wags its tail - Dances to music
