Printing Device MXPC-100A handy portable device for printing photos, drawings, notes, labels, cheat sheets, and stickers is the perfect solution for creative kids. The printer allows for instant printing of black-and-white photos directly from a smartphone, making it easy to capture and share special moments quickly. The device works with phones through the iPrint app, which can be downloaded for free from the App Store and Google Play. This app includes a drawing creator, text editor, label and banner maker, providing unlimited creative possibilities. It has a database of ready-made icons and drawings for printing, as well as a text scanning feature from photos with editing capabilities. Thanks to thermal printing technology, there is no need to replace ink - just replace the thermal paper. This makes the printer cost-effective to operate and easy to use. The device supports thermal rolls with a width of 57 mm and a thickness of 30 mm. The package includes as many as 5 rolls of thermal paper, ensuring long-lasting use. Its lightweight and portable design allows you to take the printer anywhere, making it an ideal tool for kids for school, home fun, or as a gift. The printer can also serve as a text reader from photos, which can then be edited and customized according to individual needs.
