Quad type AX ROBUST satellite converter is one of the new RED OPTICUM series. It is characterized by a very low noise figure of 0.1dB, which puts it at the forefront of converters available on the market. The converter is designed to work with four receivers or two double receivers etc. It works with any satellite receiver both SD and HD. The Quad AX ROBUST converter is a high quality, branded German converter. The converter belongs to the leading devices of this type in the world. Precise manufacturing and high technical parameters practically translate into less influence of atmospheric conditions on the quality of the received signal. Technical data: - Noise factor: 0.1 dB - Polarisation: linear H/V - Frequency range: from 10.7 GHz to 12.75 GHz - Holder diameter 40 mm - Water protection: 100% tested

Specification

Frequency: 12,75 GHz
