BiTSAT 757 cables are designed for high frequency signal transmission in terrestrial, cable, and satellite television installations. The cables have a screen with a braid coverage ratio min. 77% in accordance with the requirements of the Ordinance of the Ministry of Transport, Construction and Maritime Economy of 6 November 2012, ensuring a high level of shielding (class A as per standard PN-EN 50117-2-4). The cables are intended for installation inside buildings. For outdoor installations, cables with a black outer sheath resistant to UV should be used.

Specification

Cable length: 250 m

Colour: white

Brand: Televes

Warranty: 24 month
