Forever ForeVigo SW-300 actively combines style with the advantages of a smartwatch. It has been designed with ease of use in every situation for every occasion. It has two interchangeable straps, a stylish design and all the necessary features of a smartwatch. A precise sensor counts the number of steps taken, recognizing excessive gesticulation. ForeVigo SW-300 also gives the distance traveled and the number of calories burned. During training, the heart rate monitor will be useful. The watch analyzes sleep and I also have the opportunity to set goals to achieve each day. Bluetooth 4.2 connectivity ensures a quick and trouble-free connection to your smartphone. In this way, ForeVigo SW-300 allows you to control the music played from the phone, e.g. during training or crowded public transport. You don't have to reach for your smartphone every time you want to change a song.

Specification
