Buy now

Smartwatch myPhone CareWatch LTE runs on the Unisoc W307 chipset and the RTOS platform. This combination is used in the latest 4G phones. The devices have undergone verification in accordance with the requirements of Polish operators and have a fully configured VOLTE service, which is crucial when the 3G network is switched off. Voice calls over the 4G network provide the best coverage, the highest call quality, and the longest battery life. What VOLTE is: For the sake of your loved ones.
