EKS802WH

The unit has a high power output of up to 3000 watts, which will ensure the kettle works efficiently and the water boils quickly, reducing the time you have to wait for hot tea or coffee compared to standard 2000 watt kettles. With a capacity of 1.8 litres (min. 0.8 litres), a hot drink is guaranteed to be enjoyed by all your guests. Thanks to the swivel stand and the heater hidden in the flat bottom, this appliance is very convenient in everyday use. The user does not have to worry about forgetting to put water in the kettle - the kettle will automatically switch off after the water boils.
