Unique kettle on an even more unusual control base will attract attention in any kitchen. The kettle features a control base that allows you to choose individual settings for boiling or heating water. The kettle is equipped with special programs for preparing water, which help save time. Unusual control base – definitely sets the kettle apart from others and additionally hides a large number of functions. Temperature range regulation – the boiling temperature can be set using the control knob in the range of 40–100°C in increments of 5°C. The set parameters are visible on the display, the power button backlight will glow, and the boiling icon will blink. Keep warm function – the kettle can maintain the temperature for 10 minutes up to even 2 hours, in increments of 10 minutes. It will reheat the water when the temperature drops by 2°C below the set value or by 5°C if the set value is 100°C. Water boiling function for brewing coffee – a special coffee boiling button allows you to choose one of three predefined temperatures: • 91°C • 93°C • 96°C LCD display and backlight indicating operation – there is a convenient LCD display on the control base that intuitively shows the selected settings. Additionally, backlit buttons indicate the current status of the kettle's operation. Unique design – both the kettle and the control base are an unmatched solution for the kitchen. Easy operation – precise temperature control is straightforward thanks to the intuitive LCD display and ready-made programs. Possibility to mute the kettle's sound signaling – allows for individual adjustment of sound or silence depending on the user's needs.
