VSI601

Ironed and fresh clothes are the business card of each of us, and the iron is one of the most-bought home appliances without which we can not imagine life. Ironing, however, is not always a pleasant and quick process, and sometimes we simply lack the time to prepare the ironing station, especially when just before leaving the house it turns out that a long worn dress or shirt has creased in several places. To meet the expectations of customers and responding to market demand, the Blaupunkt brand has designed a high-quality hand-held steam cleaner VSI601. The dish is very easy to use. Just fill the water in the tank, turn on the device with one button to start the ironing process after a quick one-minute heating process. The convenience of operation is completed by a built-in switch with a lock to prevent accidental switching on and off of the dishwasher. In addition, the VSI601 model has steam regulation. By default, when you press the button, the machine will release a large steam, after you press it again the steam will change to a smaller one. Operation based on the exact penetration of fabric fibers through water vapor, makes the best results are obtained by vertical pressing. This makes the steam freely pass through the fibers, loosening and refreshing them accordingly. A long power cable (2.5 m) will allow easy maneuvering of the device during ironing, also allowing for convenient and quick refreshment of curtains and curtains. The power of the VSI601 model of 1400-1600W will provide a sufficiently strong steam that will perfectly iron and refresh your wardrobe. Detachable 260ml water tank and low weight (0.9kg) guarantee comfortable work. The device has been equipped with a number of useful functions that will definitely facilitate the ironing process. Among them is the anti-calc function that prevents scale build-up in the steam channels. Thanks to the built-in resin filter, the water is softened directly in the tank and the device retains its properties for many years. Anti-drip will take care of proper, even distribution of water vapor, preventing it from dripping on the fabric, and the automatic shut-off function will prove to be irreplaceable for more forgetful users. After a moment of inactivity, the steamer will turn itself off, saving energy and taking care of safety. The set with the dish has several practical accessories that will increase the capabilities of the device, and also allow the user to adjust the mode of operation of the device to the currently ironed fabrics. The 2-in-1 brush, apart from ironing, will allow the fabric to be cleaned of minor impurities such as hair, hair or dust. The mesh attachment will protect the material from condensation, whenever you want to refresh your clothing quickly and do it in adverse conditions, e.g. in a cold room. Then the water will condense under the surface of the cap, protecting more delicate clothes. The adapter included in the set allows you to connect a larger bottle, so you do not have to add water frequently during operation. A travel purse will allow you to take a steamer on a vacation trip or on a business trip to always be prepared to impress with clean and neat clothes.

Specification
