WiFi SMART PLUG FLSP10A The Forever Light FLSP10A smart plug is a device for controlling the power supplied to devices. It is a conveniently designed smart plug from Forever Light. Once connected to the power supply, you can manage the power remotely, turning any device on or off via an app as well as through voice commands**. The ENERGY MEASUREMENT functionality allows you to measure the amount of electricity consumed by the device connected to the plug, enabling you to check the total energy consumption on a monthly basis and directly reduce operating costs for your devices. The SCHEDULING functionality allows you to program the time to turn the device on and off. Another advantage of this feature is the ability to connect a lamp and use it as a light alarm clock. With this feature, you can save energy consumed by the devices and set the activity of the equipment only when needed. The TIMER functionality allows you to connect devices such as a humidifier, dehumidifier, or treadmill, so you can forget about switching them off. The time set by you will automatically cut off the power supply to the device – this is an excellent solution for forgetful users. The CHILD PROTECTION functionality – with this feature, you can create an additional barrier to prevent unwanted situations in your home caused by children**. This function is also available in group operation mode, allowing one click to turn off all devices available in the group. The VOICE COMMAND functionality – allows you to turn on and off one or multiple devices simultaneously, and even program previously set automations, where you give commands via Alexa or Google Assistant. The DEVICE STATUS MEMORY functionality – thanks to this feature, we can set the device to behave in a certain way in case of a power loss. This means the ability to set whether the device should be turned on or off after power is restored. The SCENES functionality – using the scenes feature, we can set any sequence of operation for all the Smart devices available in the app. With this function, devices will connect in automation, and we can set any operating modes for smart devices. For example, we can set a GOOD NIGHT scene, where all available devices will be activated, opening a new list in the app. We can program modes such as Morning scenes. This feature gives you the ability to create a friendly environment to greet the day or evening. The device also allows control of music and lighting in scenes. The DEVICE SHARING functionality – allows sharing devices with friends and family members. This means that each household member can control the equipment in their own way, ensuring that unauthorized persons do not have access to control by excluding them from previous app users – the current user decides who else can control the device. The E-F plug and Uni-Schuko sockets provide surge protection.**The child protection function involves physically locking the button as well as through the application on devices compatible with this solution. Additionally, at the plug level, we can permanently disable its operation, which will be effective in two ways.

Specification

Working temperature: -20°C up to +50°C

Frequency range: 100-240V~50/60Hz

Maximal current: 10 A

Additional informations: Wi-Fi 802.11b/b/g/n 2,4Ghz

Power: 2 400 W

Colour: white

Brand: Forever

Model: FLSP10A

Product dimensions (mm) length x width x height: 72 x 45 x 45

Warranty: 24 month

Package dimensions (mm) length x width x height: 50 x 50 x 76
