RTVBLWS007

The Wi-Fi enabled weather kit allows for real-time weather forecast updates and remote control by working with the TUYA SMART app. The weather kit consists of a thermometer and hygrometer that measure temperature and humidity both indoors and outdoors. It is possible to store measurements of the highest and lowest temperature and humidity values from a given day. A useful feature is a graphic weather forecast for the next five days, displayed with pictograms. The set also has a UV index indicator, which reports the level of ultraviolet radiation. In addition, the clock and calendar displays the time in 12/24 hour format and the names of the days of the week in 7 languages. The unit is equipped with a color LCD display with brightness adjustment and an alarm with snooze function. A thermal comfort indicator and temperature alert help monitor and maintain the appropriate room temperature. It is powered by the supplied AC adapter or optional AA batteries. The unit can be hung or placed on any surface.

Specification

Functions: measuring the temperature
temperature and humidity sensor
clock
snooze function
folding stand support
