The safety of screens and devices is now guaranteed by the Devia Cutting Plotter Cut'n'go! This modern plotter perfectly cuts the film that will protect smartphones, smartwatches, classic watches, cameras, navigation systems, tablets, and other devices. The plotter's designers have also taken curved screens of modern phones into account, and the special formula of the film fills and smooths out scratches on displays, ensuring device safety in the future. Wondering how it works? It's simple: you choose one of thousands of templates in the dedicated app, for example, a specific smartphone model, insert the film into the device, and in 30 seconds it's ready. Adhesion is completely safe and incredibly easy. The Devia Cutting Plotter, thanks to its compact size, will fit perfectly into your service point. It's worth it! With the Devia Cutting Plotter, you'll avoid excess inventory and meet all customer demands. We are the exclusive distributor of the Devia brand in Poland. We guarantee that after the first month of working with the plotter, its cost will pay for itself.
