Buy now

2.5D tempered glass with a hardness of 9H effectively protects the phone screen from damage. It provides full clarity of the image and resistance to fingerprints and dirt thanks to the oleophobic coating. The glass is extremely thin (only 0.3 mm thick), which allows for maintaining full sensitivity of the touchscreen after application. The adhesive over the entire surface eliminates the risk of dust and dirt accumulation under the glass, and the rounded edges increase comfort and safety during use. The product is dedicated exclusively to phones with flat screens.
