Buy now

Privacy glasses with a privacy filter are a product that protects the screen and the view of the displayed data. The Anti-Spy function is a darkening structure built into the tempered glass. The directional filter protects the display from being read from an angle of 28° from any side. The product has a black frame. Its reinforced structure limits the formation of scratches and absorbs energy from accidental impacts. The Privacy tempered glass also has a coating that is easy to keep clean.
