AUDI IML Stitching Pattern MagSafe CaseThe fashionable collection of protective cases for Samsung phones was created in collaboration with the German automotive giant - the elite brand Audi. This minimalist case is the perfect combination of amazing functionality and elite appearance, while providing maximum protection for your device. Treat yourself to an incredibly stylish accessory for your Samsung The case draws attention with its extraordinary look. This collection will delight even the most sophisticated tastes - a distinctive feature of each cover is the subtle scale motif, densely placed at the bottom of the case and gently fading towards the top. This motif is inspired by the upholstery found in the Audi Q5 interior. Forget about difficult case installation! Installing the case on your phone is very easy, and the case itself is thin enough that it does not significantly bulk up the device or affect its usage. Provide your phone with reliable protection The cases from this collection feature all necessary cutouts for ports and interfaces, as well as integrated button covers on the side of the phone. The gently raised edges of the case protect the screen and camera lens from scratches and breakage. Top-quality materials Each case from the IML Stitching Pattern MagSafe collection is made from high-quality durable plastic that is resistant to wear. The case consists of two elements: a back made from strong and hard polycarbonate (PC) and sides made from flexible thermoplastic polyurethane (TPU). This combination provides protection against damage and makes installation extremely easy.
