BZ47

This is a USB-C to 3.5 mm adapter cable that is compatible with iOS, Android, and Windows operating systems, making it perfect for connecting a smartphone, laptop, or tablet to a soundbar, speaker, or car audio system for an immersive music experience. This Lightning-to-aux adapter works with all 3.5 mm headphones with in-line controls, including volume adjustment, phone calls, and music playback, but does not support remote control when connecting to original Apple 3.5 mm headphones. Selected tinned copper wire cores provide impressive antioxidant capabilities and lower resistance, promising stable and faster signal transfer. It features a nylon braided housing and reinforced construction, allowing it to easily withstand over 10,000 bending tests while remaining flexible and pliable for use in tight spaces or gaps. This Type-C AUX adapter is equipped with a high-quality audio decoding chip that not only provides impressive sound decoding capabilities for minimal sound distortion but also effectively minimizes current interference for vibrant and enjoyable Hi-Fi sound.
