LXU204

E27 bulb socket with 360 degree motion sensor. An excellent quality, compact bulb socket with a built-in motion sensor. The product is intended for the use of a bulb with an E27 cap and such a cap has been installed in the device itself. LXU204 is perfect for use inside any room, especially in places where it is difficult or impossible to constantly operate the switch located on the wall. The task of the built-in motion sensor is to switch on the electric circuit under the influence of motion detected from the environment. The sensor is built into the bulb holder, so there are no extra cables. This product does not require any additional installations. The only thing the user has to do is screw the bulb socket into the socket located in the wall or on the ceiling, and then screw in the bulb. The LXU204 offers the possibility to set three parameters: the bulb lighting time after a detected detection, the brightness of the working environment and the sensitivity of the motion sensor. The device allows the use of two types of light bulbs, a traditional light bulb with a maximum power of 60 W, and an energy-saving light bulb, the power of which should not exceed 20 W. The highest quality materials used during the production process, high precision of workmanship, aesthetic appearance and modern design, all this makes LXU204 able to meet the expectations of even the most demanding users, fulfilling a functional role while taking care of safety and failure-free operation.

Specification

Sensor type: 360 °
Brand: LTC
Colour: white
Thread type: E27
Warranty: 24 month
