Children's Writing Board with Calculator MXWB-01Maxlife children's writing board with calculator is an educational tool that perfectly integrates learning and play. Designed with children in mind, it enables effective consolidation and reinforcement of knowledge through interactive entertainment. It combines two key elements: an educational calculator and a space for writing, drawing, and taking notes. This allows the child to weave math learning with creative self-expression. The board is convenient and portable, ideal for math exercises in cars, planes, or during travel. A great activity for children that ensures engagement, entertainment, and learning. It is not only an educational tool, but also an inspiring way to develop mathematical skills, logical thinking, and creativity in children. The set includes a pen that allows writing on the board and a USB-microUSB cable for charging. An instruction manual is also included to assist with the calculator's operation and indicate the functions of the various buttons. Educational CalculatorThe built-in calculator offers logical exercises that engage the child's mind. The child can solve math problems such as addition, subtraction, multiplication, or division while facing an appropriate level of difficulty. Levels of DifficultyChoosing the time to solve a problem (5, 10 seconds, or no timer) allows for the challenges to be tailored to the child's skills. The board offers the option to choose from 3 levels of difficulty, allowing adjustments to suit the abilities and experience of the student. Interactive LearningThe calculator features three logic games - one must provide the result of an operation, remember the numbers, or choose the greater number among others. This interactive method of learning promotes understanding and reinforcement of mathematical concepts. Creativity and Self-ExpressionNext to the calculator, there is space for writing, drawing, and taking notes. The child can freely create drawings or notes. The dust-free cleaning function allows for repeated use of the board for new works.

Specification

Input port type: microUSB
Input voltage: 5 V - 0.1 A
Colour: pink
Brand: Maxlife
Warranty: 12 month
