CMD201

The Blaupunkt CMD201 is a small drip coffee maker that can make coffee for 4-6 people in one go, which is an undeniable advantage of drip coffee makers. This machine is the perfect choice for all those who drink a lot of classic black coffee and for those who also want it to be easy to prepare. Coffee from a drip coffee maker is also a great alternative to coffee brewed in a mug, as it has no grounds and its flavour and aroma remain just as intense after brewing. The operation of the CMD201 is extremely simple. Place a reusable nylon filter (included) or a replaceable paper filter (1×2) into the basket above the pot, then pour in the ground coffee. Then pour the water into the dedicated tank with a maximum capacity of 0.65 litres and switch on the machine. The heated water percolates through the coffee and the finished brew goes into the pot. After brewing, the nylon filter must be emptied and washed to continue using it, the paper filter is thrown in the rubbish.

Specification

Type of product: coffee makers
Height: 25 cm
Power consumption: 600 W
Brand: Blaupunkt
Colour: black
Warranty: 24 month
