BB30BT

The BB30BT portable radio is the most advanced model in the Blaupunkt range. It offers high quality sound, thanks to a powerful amplifier and equalizer, as well as great functionality in playing music from many different sources. The model has a built-in Bluetooth module, which allows you to connect with all kinds of mobile devices compatible with this modern technology and play music selected by you or your friends during a social meeting. Both the songs stored in the memory of such devices, and music from streaming services or Internet radio stations, will sound much better than when listening through the factory speakers. The available CD drive enables the user to listen to classic CD-Audio discs and their favourite MP3 music files stored on CD-R discs. We all have traditional CDs of music we like to return to, or audiobooks of our favourite reads. The BB30BT also has a USB/SD slot for connecting any media with MP3 files stored on it or listening to music from a card with a capacity of up to 32GB. The AUX socket allows you to connect various other devices that have an analogue sound output. Those who like to stay up to date with the news broadcasted on radio stations or those who like the type of music offered by a chosen radio station will surely appreciate the built-in FM radio with the possibility to programme up to 40 favourite radio stations. An equalizer with factory presets POP, ROCK, JAZZ and CLASSIC is available to match the sound profile to the type of material you are listening to. The radio has a built-in amplifier with high, for this type of device, output power of 2 x 6 Watt RMS and can be powered either from the mains using the included cable or using optional 6 R14 batteries (not included). For battery operation, the mains cable can be stowed in the battery compartment. Radio reception is ensured by a built-in telescopic antenna and the LCD display shows the radio frequency, CD playback time and clock. The headphone socket will ensure that we can enjoy discreet listening without disturbing the peace and quiet of our roommates, and the timer (switch off timer) will make the device switch off after a selected time range. A programmable alarm completes the functionality of this handy head unit.
