AK-AD-11

Akyga® AK-AD-11 is a modern converter that allows you to connect a laptop or computer with DisplayPort output to a monitor, TV or projector with an HDMI input. Data transfer is only possible one way from DisplayPort to HDMI. This means that the product can be used as a DisplayPort -> HDMI adapter, but it will not work when the signal source is an HDMI device and the receiver is connected via DisplayPort. The equipment supports Full HD and Ultra HD technology, ensuring high quality of the transmitted sound and image. Aesthetic and short 15-centimeter cable provides comfort in use as well as a designer look.
