DIR501

The device effectively removes impurities and bacteria thanks to high pressure water, which should be poured into an appropriate container. The next step is to choose the right programme, turn on the device and apply the nozzle, from which the liquid is emitted, to the cleaned surface. The appropriate water pressure will effectively rinse away dirt and food residues, leaving your mouth, and especially interdental spaces, perfectly clean. The pressure is adjustable from 40-90PSI and the efficient water pump delivers up to 1400 pulses per minute. The DIR501 irrigator can work in three modes. The first one, Gentle, is designed mainly for people with exposed tooth necks and hypersensitivity. The stream discharged by the irrigator nozzles has less pressure and does not cause possible gum irritation. The second mode, daily, is designed for most users and the device maintains optimal working parameters in this mode. The last mode - pulse mode is characterised by varied strength of the stream for even better cleaning efficiency.

Špecifikácia

Značka: Blaupunkt
Farba: biela
Typ výrobku: sonické zubné kefky
Záruka: 24 mc
